

ASTM A515 Carbon Steel Gr 60 Sheets & Plates

Chhajed Steel & Alloys are aggressively venturing into exporting of our products to various countries.

ASTM A515 Gr. 60 Carbon Steel Plates using temperature normally only up to 750 Degree D – 780 Degree C, in the higher temperature of the heat used parts, used the nickel refractory metal. ASTM A515 Gr 60 Plates, which is useful in major industrial areas. ASTM A515 Grade 60 is a kind of steel material that is used to fabric middle or high-temperature pressure vessels. ASTM a 515 gr 60 CS Plate is called "intermediate-temperature pressure vessel plates" or "higher-temperature pressure vessels. The usual annealing temperature of ASME SA 515 Gr. 60 CS Coils is approximately 1900 Degree F (1040 Degree C). In the aeronautical field, **ASTM A515 Gr. 60 CS Coils** are used for various engine and airframe components that must withstand high temperatures.

Laboratory tests of **ASME SA 515 Gr. 60 Carbon Steel Coils** at 200 Degree C (390 Degree F) in contaminated 95 % super phosphoric acid showed corrosion rates. Light forming of ASTM A515 Gr. 60 Carbon Steel Slitting Coils can be done at temperatures down to 1600 Degree F (870 Degree C). Above about 20 % sulphuric acid, ASME SA 515 Gr. 60 Carbon Steel Perforated Coils is even more resistant than stainless steel. The behavior of ASTM A515 Gr. 60 CS Plates during cold forming is similar to that of other alloys.
