

EN 10216-2 P235GH Alloy Steel Pipes

Chhaged Steel & Alloys are aggressively venturing into exporting of our products to various countries. **EN 10216-2 P235GH** is an European specified steel for use in boilers, heat exchangers and pressure vessels. It is heat-resistant non-alloy quality steel for application in steam boiler and pressure vessel construction. The application maximum temperature is approx. 400 °C. **EN 10216-2 P235GH TC1 Alloy Steel Seamless Tubes** composition of it makes it ideal for applications where elevated working temperatures are the norm and the material is used by fabricators throughout the petrochemical, oil and gas industry. It has properties such as good corrosion resistance at high strength, good sulfide stress corrosion resistance, and higher resistance to chloride stress corrosion cracking and can be easy to weld and conform.

EN 10216-2 P235GH TC1 is also a key consumable material for boilers and pressurized vessels. However, any manufacturer who is using this material for any application of intense pressure should work out all possibilities in the design calculations.
